

HPD UNIQUE IDENTIFIER: 1421010834432

CLASSIFICATION: 09 65 66 Resilient Athletic Flooring

PRODUCT DESCRIPTION: Premium prefabricated vulcanized dual durometer rubber flooring for indoor sports applications. Sport Impact has an embossed non-porous surface with randomly dispersed multicolored granules, and is both low-emitting and low-maintenance. With its thicker surface layer, Sport Impact resists well to wear from heavy weights and intense sports activities, offering uniform shock absorption and dimensional stability. This HPD covers Sport Impact with a 6 mm (0.236 in) thickness, available in sheets or tiles (please refer to product literature for all colors and format dimensions). Sport Impact is made in Luxembourg, in a Mondo facility that has ISO 9001, ISO 14064 and ISO 50001 certificates. We take pride in making high-quality rubber flooring that can be utilized in areas with stringent health and safety controls; we do not use red listed ingredients (2025 LBC Red List CASRN Guide) to manufacture our Sport Impact rubber flooring product, which includes but is not limited to harmful chemicals of concern like bisphenol A (BPA), formaldehyde, halogens, heavy metals, isocyanates, phthalates, polyvinyl chloride (PVC), perfluorinated compounds (PFC), and perfluoroalkyl and polyfluoroalkyl substances (PFA).

This HPD is Identified-No because some substances are undisclosed. All
substances marked "Undisclosed" are being kept confidential to protect
any and all related trade secrets; each substance has been screened and
any human and/or environmental health hazard has been listed in full
transparency, as generated by the HPDC's HPD Builder Tool.

*Form-Specific Hazard: This substance's GreenScreen Benchmark or
List Translator score and the applicable hazards are related to
particulate inhalation, which is expected to occur only during
manufacture, installation, maintenance, or demolition, due to activities
such as sawing, sanding, grinding, or intensive cleaning. For this
reason, this score is intentionally omitted from the "Contents highest
concern" line above. See HPDC's Special Conditions policy for more
information.

INGREDIENT DESCRIPTION: Pre-Consumer Recycled Content				
ANALYTICAL TESTING: The pre-consumer recycled content comes from the same factory, but different products. Materials are produced through controlled manufacturing processes including raw material analysis and floor quality verifications, where secondary analytical testing of the recycled content is not required. The manufacturer is responsible for the verification and composition attested, using the mass balance approach.				
BATCH VARIATION: Yes, The granulated pre-consumer rubber content (i.e. recycled granulated material from different rubber products and production lines in our plant) that is present in the underside of the product may be of varying color, depending on the rubber flooring products being diverted from waste.				
COUNTRY OF ORIGIN: Italy				

MATERIAL CONTENT NOTES: The Pre-Consumer Recycled Content is a mixture of rubber dust, scraps and offcuts from various rubber products, from our plant's own production processes. The recycled content is reintroduced into new flooring products, as part of our internal waste diversion protocols.

Because our mixed recycled content comes from our various rubber products and in-house processes, the potential presence of unknown hazardous substances, as suggested below in the automatically generated text from the HPD builder tool, is not as relevant in comparison with using external mixed content of unknown origin; our mixed recycled content is pre-consumer (post-industrial) content with CASRN already screened for any human and/or environmental health hazard, as generated by the HPDC's HPD Builder Tool under the Substances tab.

The pre-consumer recycled content comes from our own rubber flooring, produced through controlled manufacturing processes with quality verifications, where secondary analytical testing of the recycled content is not required.
This disclosure does not provide information on the potential presence of hazardous substances which may be found in certain mixed recycled materials.
