Air Flake
by Unika Vaev

HPD UNIQUE IDENTIFIER: 23120
CLASSIFICATION: 09 80 00 Acoustic Treatment
PRODUCT DESCRIPTION: Airflake is made from molded polyester felt fiber that is formed into a variety of open or closed hexagonal snowflake shapes that are assembled together using small plastic clips. Airflake may be mounted to a ceiling or wall using a straight rail. The modules are assembled together to form 'open' screens that shape or suggest new spaces within a space, while allowing light to pass through unobstructed. Airflake XL is a larger version of the regular Airflake module.

⬡ Section 2: Content in Descending Order of Quantity

This section lists contents in a product based on specific threshold(s) and reports detailed health information including hazards. This HPD uses the inventory method indicated above, which is one of three possible methods:

- *Basic Inventory method with Product-level threshold.*
- *Nested Material Inventory method with Product-level threshold*
- *Nested Material Inventory method with individual Material-level thresholds*

Definitions and requirements for the three inventory methods and requirements for each data field can be found in the HPD Open Standard version 2.2, available on the HPDC website at: *www.hpd-collaborative.org/hpd-2-2-standard*

Section 4: Accessories

This section lists related products or materials that the manufacturer requires or recommends for installation (such as adhesives or fasteners), maintenance, cleaning, or operations. For information relating to the contents of these related products, refer to their applicable Health Product Declarations, if available.

No accessories are required for this product.

Section 5: General Notes

Aircone End is a half-tile capable of creating a straight lines in your Aircone configuration. - Aircone may be mounted to the ceiling or wall with a straight rail in three lengths, 59", 78.75" or 118", that can be joined or cut on site. .

The Health Product Declaration (HPD) Open Standard provides for the disclosure of product contents and potential associated human and environmental health hazards. Hazard associations are based on the HPD Priority Hazard Lists, the GreenScreen List Translator™, and when available, full GreenScreen® assessments. The HPD Open Standard v2.1 is not:

- *a method for the assessment of exposure or risk associated with product handling or use,*
- *a method for assessing potential health impacts of: (i) substances used or created during the manufacturing process or (ii) substances created after the product is delivered for end use.*

Information about life cycle, exposure and/or risk assessments performed on the product may be reported by the manufacturer in appropriate Notes sections, and/or, where applicable, in the Certifications section.

The HPD Open Standard was created and is supported by the Health Product Declaration Collaborative (the HPD Collaborative), a customer-led organization composed of stakeholders throughout the building industry that is committed to the continuous improvement of building products through transparency, openness, and innovation throughout the product supply chain.

The product manufacturer and any applicable independent verifier are solely responsible for the accuracy of statements and claims made in this HPD and for compliance with the HPD standard noted.
