CLASSIFICATION: 04 05 13 Masonry Mortaring
PRODUCT DESCRIPTION: This HPD covers Blocfiller® Masonry Grout and Econofill® Masonry Grout for concrete block cavities by Daubois Products Inc. Blocfiller® is used as a reinforcing and consolidating grout to fill the cores, cells, and cavity spaces of concrete blocks and to embed rebars in unit masonry construction. Blocfiller® is formulated to meet the specifications of CSA A179 for fine masonry grouts and is available in 15, 20, 25, and 30 MPa. Econofill® is also formulated to meet the specifications of CSA A179 for fine masonry grouts and is available in 20 MPa.

Residuals/Impurities Evaluation
Not Completed

Explanation(s) provided for Residuals/Impurities?
Yes

For all contents above the threshold, the manufacturer has:

Characterized Yes
Provided weight and role.

Screened Yes
Provided screening results using HPDC-approved methods.

Identified Yes
Provided name and CAS RN or other identifier.

CONTENT IN DESCENDING ORDER OF QUANTITY

Summary of product contents and results from screening individual chemical substances against HPD Priority Hazard Lists and the GreenScreen for Safer Chemicals®. The HPD does not assess whether using or handling this product will expose individuals to its chemical substances or any health risk. Refer to Section 2 for further details.

INVENTORY AND SCREENING NOTES:

Antimicrobial Pesticides Reporting: This product does not contain substance(s) that are intentionally added above the [Product - 1,000 ppm] threshold to act as antimicrobials.

Special conditions applied: Geological Material [LEED v4] "Yes ex/SC" result applies only to materials and substances for which special conditions were applied. Therefore, "Yes ex/SC" does not disqualify the product from the LEED v4 Materials and Resources Disclosure and Optimization credit, Option 1. The HPD was prepared using a Nested Materials Inventory with a product threshold of 1,000 ppm. Admixtures are added to the Blocfiller and Econofill formulations, but they are present in the final product below the disclosure threshold of 1,000 ppm and therefore were not disclosed. The content inventory includes ranges to protect Daubois' proprietary formulations. Blocfiller and Econofill contain geological materials, which are defined as materials with special conditions (substances without an ID) according to the HPDC. The geological material in Daubois products has been reported under SCGeoMats/2023-07-20. Substances present in Blocfiller and Econofill, as well as known residuals and impurities, have been disclosed at 1,000 ppm. Additional details on how residuals and impurities were considered are available in the appropriate sections.

VOLATILE ORGANIC COMPOUND (VOC) CONTENT

Section 2: Content in Descending Order of Quantity

This section lists contents in a product based on specific threshold(s) and reports detailed health information including hazards. This HPD uses the inventory method indicated above, which is one of three possible methods:

- *Basic Inventory method with Product-level threshold.*
- *Nested Material Inventory method with Product-level threshold*
- *Nested Material Inventory method with individual Material-level thresholds*

Definitions and requirements for the three inventory methods and requirements for each data field can be found in the HPD Open Standard version 3.0, available on the HPDC website at: www.hpd-collaborative.org/hpd-3-0-standard

SAND — %: 65.9000 - 74.9000

PRODUCT THRESHOLD: 1000 ppm | RESIDUALS AND IMPURITIES EVALUATION COMPLETED: No | MATERIAL TYPE: Geologically Derived Material

RESIDUALS AND IMPURITIES NOTES: According to the information provided by the supplier, no evaluation of residuals or impurities has been conducted for the sand used.

OTHER MATERIAL NOTES: The weight percentage range is used to account for product variability and/or to protect the confidentiality of the material composition in the manufacturing process.

The Health Product Declaration (HPD) Open Standard provides for the disclosure of product contents and potential associated human and environmental health hazards. Hazard associations are based on the HPD Priority Hazard Lists, the GreenScreen List Translator™, and when available, full GreenScreen® assessments. The HPD Open Standard is not:

- *a method for the assessment of exposure or risk associated with product handling or use,*
- *a method for assessing potential health impacts of: (i) substances used or created during the manufacturing process or (ii) substances created after the product is delivered for end use.*

Information about life cycle, exposure and/or risk assessments performed on the product may be reported by the manufacturer in appropriate Notes sections, and/or, where applicable, in the Certifications section.

The HPD Open Standard was created and is supported by the Health Product Declaration Collaborative (the HPD Collaborative), a customer-led organization composed of stakeholders throughout the building industry that is committed to the continuous improvement of building products through transparency, openness, and innovation throughout the product supply chain.

The product manufacturer and any applicable independent verifier are solely responsible for the accuracy of statements and claims made in this HPD and for compliance with the HPD standard noted.
